

Scilab Code for
Engineering Electromagnetics,
by William Hayt & John Buck¹

Created by
Prof. R. Senthilkumar
Institute of Road and Transport Technology
rsenthil_signalprocess@in.com

Cross-Checked by

17 January 2011

¹Funded by a grant from the National Mission on Education through ICT, <http://spoken-tutorial.org/NMEICT-Intro>. This Textbook Companion and scilab codes written in it can be downloaded from website www.scilab.in

Book Details

Authors: William Hayt and John Buck

Title: Engineering Electromagnetics

Publisher: Tata McGraw Hill

Edition: 7th

Year: —

Place: New Delhi

ISBN: 0070612234

Scilab numbering policy used in this document and the relation to the above book.

Fig Figure

Exa Example (Solved example)

Eqn Equation (Particular equation of the above book)

ARC Additionally Required Codes

For example, Exa 3.51 means solved example 3.51 of this book. Sec 2.3 means a scilab code whose theory is explained in Section 2.3 of the book.

Contents

List of Scilab Codes	4
1 Vector Analysis	2
2 Columb's Law and Electric Field Intensity	6
3 Electric Flux Density, Gauss's Law and Divergence	10
4 Energy and Potential	16
5 Current and Conductors	21
6 Dielectrics and Capacitance	24
7 Poisson's and Laplace's Equation	27
8 The Steady Magnetic Field	32
9 Magnetic Forces, Materials and Inductance	35
11 Transmission Lines	47
12 The Uniform Plane Wave	58
13 Plane Wave Reflection and Dispersion	65
14 Guided Wave and Radiation	76

List of Scilab Codes

Exa 1.1	Program to find the unit vector	2
Exa 1.2	Program to find the phase angle between two vectors .	2
Exa 1.3	Transform the vector of Rectangular coordinates into cylindrical coordinates	3
Exa 1.4	Transform the vector of Rectangular coordinates into spherical coordinates	4
Exa 2.1	Program to Calculate force exerted on Q2 by Q1 . . .	6
Exa 2.2	Program to Calculate Electric Field E at P due to 4 identical charges	7
Exa 2.3	Program to find the total charge enclosed in a volume	8
Exa 3.1	Program to find Electric Flux density 'D' of a uniform line charge	10
Exa 3.2	Program to calculate surface charge density, Flux den- sity, Field Intensity of coaxial cable	11
Exa 3.3	Program to calculate the total charge enclosed in a vol- ume at the origin	12
Exa 3.4	Program to Find the Divergence of 'D' at the origin .	13
Exa 3.5	Program to verify the Divergence theorem for the field 'D'	14
Exa 4.1	Program to find the work involved 'W' in moving a charge 'Q' along shorter arc of a circle	16
Exa 4.2	Program to find the work involved 'W' in moving a charge 'Q' along straight line	17
Exa 4.3	Program to calculate E, D and volume charge density using divergence of D	18
Exa 5.1	Program to find the resistance, current and current den- sity	21

Exa 5.2	Program to find potential at point P, Electric Field Intensity E, Flux density D	22
Exa 5.3	Program to determine the equation of the streamline passing through any point	23
Exa 6.1	Program to calculate D, E and Polarization P for Teflon slab	24
Exa 6.2	Program to calculate E and Polarization P for Teflon slab	25
Exa 6.3	Program to calculate the capacitance of a parallel plate capacitor	25
Exa 7.1	Derivation of capacitance of a parallel plate capacitor .	27
Exa 7.2	Capacitance of a Cylindrical Capacitor	28
Exa 7.3	Program to determine the electric field of a two infinite radial planes with an interior angle α	29
Exa 7.4	Derivation of capacitance of a spherical capacitor . . .	30
Exa 7.5	Potential in spherical coordinates as a function of θ V(θ)	31
Exa 8.1	Program to find the magnetic field intensity of a current carrying filament	32
Exa 8.2	Program to find the curlH of a square path of side 'd'	33
Exa 8.3	Program to verify Stokes theorem	33
Exa 9.1	Program to find magnetic field and force produced in a square loop	35
Exa 9.2	Program to determine the differential force between two differential current elements	36
Exa 9.3	Program to calculate the total torque acting on a planar rectangular current loop	37
Exa 9.4	Program to find the torque and force acting on each side of planar loop	38
Exa 9.5	Program to find Magnetic Susceptibility, H , Magnetization M	40
Exa 9.6	Program to find the boundary conditions on magnetic field	41
Exa 9.7	Program to find magnetomotive force 'Vm' and reluctance 'R'	42
Exa 9.8	Program to find total Magnetic Flux Density in Weber	43
Exa 9.9	Program to calculate self inductances and Mutual Inductances between two coaxial solenoids	44

Exa 11.1	Program to determine the total voltage as a function of time and position in a loss less transmission line	47
Exa 11.2	Program to find the characteristic impedance, the phase constant an the phase velocity	47
Exa 11.3	Program to find the magnitude and phase of characteristic impedance Z_0	48
Exa 11.4	Program to find the output power and attenuation coefficient	49
Exa 11.5	Program to find the power dissipated in the lossless transmission line	49
Exa 11.6	Program to find the total loss in lossy lines	50
Exa 11.7	Program to find the load impedance of a slotted line .	51
Exa 11.8	Program to find the input impedance and power delivered to the load	51
Exa 11.9	Program to find the input impedance for a line terminated with pure capacitive impedance	53
Exa 11.10	Program to find the input impedance for a line terminated with impedance (with inductive reactance) . . .	54
Exa 11.11	Program to find the voltage at the load resistor and the current in the battery	54
Exa 11.12	Program to plot the voltage and current through a resistor	56
Exa 12.1	Program to determine the phasor of forward propagating field	58
Exa 12.2	Program to determine the instantaneous field of a plane wave	58
Exa 12.3	Program to find the Phase constant, Phase velocity, Electric Field Intensity and Intrinsic ratio	59
Exa 12.4	Program to find the penetration depth and intrinsic impedance	60
Exa 12.5	Program to find the attenuation constant, propagation constant and intrinsic impedance	61
Exa 12.6	Program to find skin depth, loss tangent and phase velocity	62
Exa 12.7	Program to find the electric field of linearly polarized wave	63
Exa 13.1	Program to find the electric field of incident, reflected and transmitted waves	65

Exa 13.2	Program to find the maxima and minima electric field	66
Exa 13.3	Program to determine the intrinsic impedance of the unknown material	68
Exa 13.4	Program to determine the required range of glass thickness for Fabry-perot interferometer	68
Exa 13.5	Program to find the required index for the coating and its thickness	69
Exa 13.6	Program to find the phasor expression for the electric field	70
Exa 13.7	Program to find the fraction of incident power that is reflected and transmitted	71
Exa 13.8	Program to find the refractive index of the prism material	72
Exa 13.9	Program to determine incident and transmitted angles	73
Exa 13.10	Program to determine group velocity and phase velocity of a wave	74
Exa 13.11	Program to determine the pulse width at the optical fiber output	74
Exa 14.1	Program to determine the cutoff frequency for the first waveguide mode($m=1$)	76
Exa 14.2	Program to determine the number of modes propagate in waveguide	76
Exa 14.3	Program to determine the group delay and difference in propagation times	77
Exa 14.4	Program to determine the operating range of frequency for TE ₁₀ mode of air filled rectangular waveguide . . .	78
Exa 14.5	Program to determine the maximum allowable refractive index of the slab material	79
Exa 14.6	Program to find the V number of a step index fiber . .	79
ARC 1	Program to calculate the attenuation constant of good dielectric	79
ARC 2	Program used to convert cartesian coordinates into cylindrical coordinates	80
ARC 3	Program used to convert cartesian coordinates into spherical coordinates	80
ARC 4	Program used to find the cross product of two vectors	80
ARC 5	Program used to convert the cylindrical coordinates into	81
ARC 6	Program to find the dot product of two vectors	81
ARC 7	Program to find the electrical length	81

ARC 8	Program used to calculate the electric field intensity of a line charge	81
ARC 9	Program to find the group delay difference	82
ARC 10	Program to find the group delay	82
ARC 11	Program to find the intrinsic impedance of dielectric	82
ARC 12	Program to find the intrinsic impedance of a good dielectric	82
ARC 13	Program to find the free space permittivity and free space permeability	83
ARC 14	Program used to find the capacitance of a parallel plate Capacitor	83
ARC 15	Program to find the impedance of a parallel connection	83
ARC 16	Program used to calculate the phase angle	84
ARC 17	Program to find the phase constant of dielectric	84
ARC 18	Program to find the phase constant of a good dielectric	84
ARC 19	Program to find the phase velocity	85
ARC 21	Program to find the propagation constant	85
ARC 22	Program to find the reflection coefficient	85
ARC 23	Program to find the reflection coefficient	85
ARC 24	Program to calculate the skin depth of a good conductor	86
ARC 25	Program to find the refracted angle using snell's law	86
ARC 26	Program used to convert spherical coordinates into cartesian coordinates	86
ARC 27	Program used to find the Unit vector	87
ARC 28	Program to find the Voltage Standing Wave Ratio VSWR	87

Chapter 1

Vector Analysis

Scilab code Exa 1.1 Program to find the unit vector

```
1 //Caption:Program to find the unit vector
2 //Example1.1
3 //page 8
4 G = [2,-2,-1]; //position of point G in cartesian
    coordinate system
5 aG = UnitVector(G);
6 disp(aG,'Unit Vector aG =')
7 //Result
8 //Unit Vector aG =
9 //      0.6666667  - 0.6666667  - 0.3333333
```

Refer to the following Scilab code for UnitVector [ARC 27](#)

Scilab code Exa 1.2 Program to find the phase angle between two vectors

```
1 //Caption: Program to find the phase angle between
    two vectors
2 //Example1.2
3 //page 11
4 clc;
5 Q = [4,5,2]; //point Q
6 x = Q(1);
```

```

7 y = Q(2);
8 z = Q(3);
9 G = [y, -2.5*x, 3]; //vector field
10 disp(G, 'G(rQ) =')
11 aN = [2/3, 1/3, -2/3]; //unit vector- direction of Q
12 G_dot_aN = dot(G, aN); //dot product of G and aN
13 disp(G_dot_aN, 'G.aN =')
14 G_dot_aN_aN = G_dot_aN*aN;
15 disp(G_dot_aN_aN, '(G.aN)aN=')
16 teta_Ga = Phase_Angle(G, aN) //phase angle between G
    and unit vector aN
17 disp(teta_Ga, 'phase angle between G and unit vector
    aN in degrees =')
18 //Result
19 // G(rQ) =      5.   - 10.      3.
20 // G.aN =      - 2.
21 // (G.aN)aN =      - 1.33333333 - 0.66666667
    1.33333333
22 // phase angle between G and unit vector aN in
    degrees =    99.956489

```
